Acopian Introduces Power Supplies Mounted in NEMA 4X Enclosures

Easton, PA – April 3, 2007 – Acopian is now providing power supplies pre-mounted in NEMA 4X enclosures for applications requiring allowance for environmental conditions and meeting safety regulations. The enclosures provide substantial protection from the infiltration of dust and other airborne particles as well as dripping and splashing liquids, and prevent the possibility of accidental contact by personnel.

Outputs up to 30 watts are now available from mini power supplies mounted in NEMA enclosures with a footprint of 4 3/4" x 4 3/4". Power supplies with higher wattage outputs are being added to the initial offerings.

Information and photos are available on the Acopian website:
<http://www.acopian.com/NEMA.html> Prices start at \$221.00. Lead time is two to three weeks.

About Acopian

Acopian has been designing and manufacturing power supplies since 1957. Standard models have outputs from 1V to 30kV, and up to 1200W. Each is shipped within 3 days (larger units ship within 9 days) after receiving an order. If no standard model meets your needs, we can customize a model for you, or design a 'special' for your unique requirements. Acopian also manufactures redundant power supplies in three form factors: rack mounting, (some with power supplies that plug in from the front), wall mounting modular, and multiple output power systems. All systems come with a full 5-year warranty and are shipped within 9 days.
